proteins or their active domains. The polypeptides, polynucleotides and national states to polynucleotides are used in a method of antibodies raised against the polypeptides are used in a method of antibodies raised against the polypeptides are used by the aberrant treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as considered to polypeptides are used to identify compounds which bind to the molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides are used to interpreted to recombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or target drugs to a tumour, in assays to determine quantitative raise antibodies/elicit an immune response, to determine quantitative polypeptides of the invention may also be useful in treating platelet polypeptides of the invention and survival of stem cells, as the coll disorders, regenerating bone, cartilage, tendon, disorders, treating observation and survival of stem cells, as a the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, as the proliferation of from autoimmunity, cancer, allergy, asthma, virel or from autoimmunity, cancer, allergy, asthma, virel or from autoimmunity, and asthma, asthma, asthma, asthma, assume and and an antima and asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection. The present sequence encodes a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to polynucleotides encoding novel human

This sequence represents the coding region for a fusion protein comprising a T-cell receptor (TCR) alpha chain linked to a c-jun leucine zipper motif. The TCR gene is taken from clone JMT2 and is targeted to an HLA-A2 influenca virus matrix protein epitope. The invention relates to a synthetic multivalent complex for binding to a major the histocompatibility complex (MHC) peptide complex. The multivalent TCR histocompatibility complex (MHC) peptide complexes and delivery complexes are useful for detecting MHC-peptide complexes and delivery of the of therapeutic agents to target cells, in vivo. The specificity of the TCRs enables the localization of the liposome-contained drugs to the TCRs enables tite such as a tumour or virus-infected cell. This would be useful in many situations and in particular against tumours because not all cells in the tumour present antigens and therefore are not all

This sequence represents the coding region for a fusion protein comprising a T-cell receptor (TCR) alpha chain linked to a c-jun leucine in the per motif. The TCR gene is taken from clone JM22 and is targeted to a HLA-A2 influenza virus matrix protein epitope. The sequence also the protein in the 5' end of the gene to enhance expression of the protein in E. coll. The invention relates to a synthetic multivalent complex. The multivalent TCR complexes are useful for detecting in WHC)-peptide complexes and delivery of therapeutic agents to target cells, in vivo. The specificity of the TCRs enables the localization of the Varye. The specificity of the TCRs enables the localization of the virus-infected cell. This would be useful in many situations and in complexed and therefore are not all cells in the tumour present virus and therefore are not all detected by the immune system.
                                                                                                                                                                                                                                                                                                                                                                                               Fusion protein; T-cell receptor; c-jun; leucine zipper motif; tumour; ss; influenza virus matrix protein epitope; major histocompatibility complex;

Sequence 7, Application US/08480753
Patent No. 5830675
GENERAL INFORMATION:
APPLICANT: Targan M.D., Stephan R.
APPLICANT: Viditch Ph.D., Alda M.
TITLE OF INVENTION: METHODS FOR SELECTIVELY DETECTING
TITLE OF INVENTION: ULCERATIVE COLITIS, PRIMARY SCLEROSING CHOLANGITIS, OR TITLE OF INVENTION: TYPE I AUTOIMMUNE HEPATITIS
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wendy A. Whiteford, Esq.
STREET: 44 South Flower Street, Suite 2000

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-34479, and 484488-489479."

The sequence contained an oligo-dT track that was present in the oligo-uncleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the Soares Lab Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the CDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
normalized rat ye library cDNA Library Preparation: M.B. Soares
Lab Clone distribution: clones will be available through Research

polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-E1
library is a subtracted library derived from the UI-R-E0
library. The UI-R-E0 library consisted of a mixture of
library. The UI-R-E0 library constructed from
individually tagged normalized libraries constructed from
individually tagged normalized libraries of species present between the Not I site and the
nucleotides present between the Not I site and the
oligo-dT track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-E1) was constructed as follows: PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 amplified cDNA inserts from a pool of UT-R-EO clones from which 3' ESTS had been derived was used as a driver in a hybridization with the UT-R-EO library in the form of single-stranded clicks. The remaining single-stranded clicks the remaining single-stranded clicks the remaining subject of the driver in a hydroxyapatite column chromatography, converted to

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dr track served to identify it as a clone from the normalized rat brain pool library CDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bonaldo,M.F., Lennon,G. and Soares,M.B. The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized rat eye library CDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research

                                                                                                                                                                                                                                                                      COMMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     five individually tagged normalized rat libraries:
brain-nRBP (20%), heart-nRHP (20%), kidney-nRKP (20%),
aorta-nRAP (20%), and placenta-nRPP (20%). Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental time-points:
embryonic day 17, embryonic day 19, embryonic day 21,
embryonic the aorta pool does not contain embryonic
day 17 RNA and the placenta pool contains only the three
embryonic stages). Each library was normalized
individually according to the procedure described by
Bonaldo, Lennon & Soares (Genome Research Genome 6:
791-806, 1996). For construction of the DNO subtracted
library, plasmid DNA from each of the five individually
tagged normalized libraries was mixed in the proportions
specified above and electroporated into competent bacteria
for production of single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized libraries
was then used as a tracer in a subtractive hybridization
with a driver (PCR amplified inserts from a plasmid DNA
template preparation) comprising: a set of about 1,000
arrayed clones from each of the five non-normalized
libraries of brain (CTOS), heart (CSOS), kidney (CUOS),
aorta (CWOS), and placenta (CXOS), kidney (CUO), and
clones from each of the five normalized about 33.3% of the
final driver population. A set of about 2,000 arrayed
clones from each of the five normalized of brain
(CTO), heart (CSO), kidney (CUO), aorta (CWO), and
placenta (CXO). Rhe resulting pool of about 10,000 clones
represented about 66.6% of the final driver population.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EST 19-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó;

//note="Vector: pT73D-pec (Pharmacia) with a Urr-DKO
library is a subtracted library derived from a mixture of
five individually tagged normalized rat libraries:
brain-nRBP (20%), heart-nRBP (20%), Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental time-points:
embryonic day 17, embryonic day 19, embryonic day 21,
adult day 1, adult day 1, adult day 75, and adult day
200. (Exception: the aorta pool does not contain embryonic
day 17 RNA and the placenta pool contains only the three
embryonic stages). Each library was normalized
andividually according to the procedure described by
Bonaldo, Lennon & Soares (Genome Research Genome 6:
791-806, 1996). For construction of the DKO subtracted
individually according to the procedure described by
tagged normalized libraries was mixed in the proportions
specified above and electroporated into competent bacteria
for production of Single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized libraries
was then used as a tracer in a subtractive hybridization
with a driver (PCR amplified inserts from a plasmid DNA
template preparation) comprising: a set of about 1,000
arrayed clones from each of the five nornormalized
clones from each of the five nornormalized
final driver population. A set of about 2,000 arrayed
clones from each of the five mornalized about 33.3% of the
final driver population. A set of about 2,000 arrayed
clones from each of the five mornalized becaused
clones from each of the five Robert (CWO), heart (CSO), kidney (CWO), and placent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Email: msoares@blue.weeg.ulowa.edu

AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine cor settlec'threonine kinase (PTK and STK) families. The polynucleotides cor settlec'threonine kinase and the polypeptides may be used in the encoding protein kinases and treatment of diseases associated with cancers (especially cancers of haematopoletic origin), cardiovascular immune related diseases (e.g. rheumatooi disorders (e.g. disorders (e.g. schizophrania), neurological cancers (e.g. schizophrania), neurological cancers (e.g. HIV) and reproductive disorders (e.g. asthma), infectious constants of disease), inflammatory disorders (e.g. infertility).

C disease (e.g. HIV) and reproductive disorders (e.g. infertility).

C disease (e.g. HIV) and so DNA probes in diagnostic assays.

C disease (e.g. HIV) and better as an antiquent in the production constants assays to indentify assays to identify.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding human kinase polypeptides, useful for preventing

The present sequence encodes a novel protein kinase. The nucleic acids and the protein kinases they encode may be used in the treatment and and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as INA probes in diagnostic and kinase antigonists may also be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies of antibodies of kinase expression and activity of and kinase antipodies expression and activity include rheumatoid arthritis, atheroscierosis, autoimmune activity include rheumatoid arthritis, atheroscierosis, autoimmune disorders, cardiomyopathies, strokes, renal failure, complications of organ transplantation, myocardial infarction, condative-stress related disorders, chronic inflammatory pelvic disease, multiple sclerosis, asthma, repronductive hierarchers cardiomyopathies, strong classes, carcers and chronic inflammatory pelvic disease, multiple sclerosis, asthma, repronductive hierarchers.
                                                       Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers -
                                                                        immunosuppressive; cardiant; renal; antiinflammatory; antiasthmatic; dermatological; antidiabetic; antiinfertility; gene therapy; vaccine; immune disorder; cardiovascular disease; neurodegenerative disease; cancer; autoimmune disorder; stroke; inflammatory bowel disease; inflammatory pelvic disease; multiple sclerosis; psoriasis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention provides novel human protein kinase polypeptides, 3714, 16742, 23546 and 13887 and nucleic acid molecules encoding them. The control kinase polypeptides can be expressed by standard recombinant protein kinase polypeptides can be expressed by standard recombinant can useful for diagnostic and screening methods to identify subjects (at are useful for diagnostic and screening methods to identify subjects (at care useful for an encoder of the control of the control of disorders. 3714, 16742, 23546 or 13887 nucleic acids, polypeptides and cancer or cellular proliferation and/or differentiation disorders. Other cancer or cellular proliferation and/or differentiation disorders. Other cattvity that can be treated include bone related disorders, inflammatory disorders, autoimmune diseases, cardiovascular disorders and liver diseases. The present sequence represents a human protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; foetal protein; cytostatic; immunosuppressive; immunostimulant;
